

Superior Glue Will Not Stick To Your Hands

Prescription Treatment® brand Sensor® Monitoring Cards...

Provide the monitoring that is basic to successful implementation of Prescription Treatment strategies. Monitoring provides an early warning system against insect invasions and rapid outbreaks. Sensor Monitoring Cards are the best way to eliminate guesswork by evaluating if your insect control program is working.

Sensor 3" x 5" Yellow Monitoring Cards

- Superior, Posi-Trap glue will not stick to your hands
- Gridded for easy reading
- Easy to remove covers
- Durable, long lasting
- Non-sticky edge
- Four packs of 30 cards in each box
6 boxes in each case, totaling 720 cards per master case
- Catches winged aphids, leafminer adults, thrips, whiteflies, fungus gnat adults, shore flies, fruit flies, leafhoppers and other flying insects

How to use Sensor Monitoring Cards

What will they catch?

Winged aphids, leafminer adults, thrips, whiteflies, fungus gnat adults, shore flies, fruit flies, leafhoppers and other flying insects.

Where should they be placed?

Just above the canopy—where flight occurs. Fungus gnats, shore flies and leafminers can also be caught just above the soil.

Why use Sensor cards?

Sensor cards are packed in unique polybag Fresh-Packs for less card handling and convenient storage. They are coated on both sides with non-drip glue that will not stick to your skin. And Sensor cards have non-sticky edges for easier handling.

How many cards should cards should be used?

Start with one card per 500 sq. ft. Use additional cards to better monitor entry points (doors & vents), to better determine “hot” spots within susceptible varieties, and to better monitor low level populations.

How often should cards be changed?

Change cards at routine intervals and record insect catch data.
